Proud members of accredited associations:

Protect your business with first class security and customer service

At Tech Services Security, we provide customized security & safety solutions for your building and your people. With outstanding 24 hour customer service, honesty and integrity, we will protect you with innovative technological systems, and we will work hand in hand with your staff to implement the most secure working environment possible.

Our turnkey approach to security & fire safety solutions comes with careful analysis and innovative design build services. We use all measures to thoroughly evaluate your organization and provide a comprehensive analysis before any system recommendation is made. Predictive and preventive solutions are laid out for you so that all possible issues or threats are considered before implementing a system that is tailor made for you.

Tech Services Security is your single source for all your security needs:

Access Control Systems:

Electronically monitor employee activity, oversee admittance in high security areas, and manage a more secure working environment.

Video Surveillance:

Identify events and suspicious behavior, reduce employee misconduct, protect against fraudulent injury claims and obtain remote monitored video and storage solutions.

Theft / Intrusion Systems:

Implement custom designed multi-area monitoring, detect motion in high sensitive areas, provide interior and perimeter protection.

Fire & Life Safety Systems:

Early warning smoke detection, sprinkler supervision, immediate alarm response, adaptable advanced technologies, and easy integration with other security systems.

Equipment & Environmental Monitoring:

Automated remote control of equipment function, prevent system failure, protect against hazardous materials or breakdowns, and ensure smooth operations.

Remote Notification:

Automatic notification of events and alarms via instant email or wireless phone.

24 Hour UL Central Station Monitoring:

Innovative monitoring with information sharing technology via the web, and redundant monitoring capabilities.
